

We will make the FAST API Documentation according to our DB Schema.
The main performing operations are CRUD operation through POST, GET, PUT, PATCH and DELETE.

I am writing the operations for the User and similarly all endpoints works like this.

Creating User (POST):

API Call:
POST /user

Request:

```
{
  "email": "moez.ulhassan21@gmail.com",
  "contact": "030000000",
  "address": "Lahore, Pakistan"
}
```

Response:

```
{
  "message": "User created successfully",
  "userId": "u1"
}
```

Getting User (GET):

API Call:

GET /user/ {userId} for Example u1 in this case

Result:

```
{
  "userId": "u1",
  "email": "moeez.ulhassan21@gmail.com",
  "contact": "0300000000",
  "address": "Lahore, Pakistan"
}
```

Update User (PUT):

API Call:

PUT /user/ {userId} for example u1 in this case

Request:

```
{
  "email": "moeez@gmail.com",
  "contact": "0300000080",
  "address": "Islamabad, Pakistan"
}
```

Response:

```
{
  "email": "moeez@gmail.com",
  "contact": "0300000080",
  "address": "Islamabad, Pakistan"
}
```

User will be updated completely at u1

Modify User (PATCH):

API Call:

PATCH /users/{userId} for example u1

Request:

```
{
  "contact": "0300000090"
}
```

Result:

```
{  
  "email": "moeez@gmail.com",  
  "contact": "0300000090",  
  "address": "Islamabad, Pakistan"  
}
```

Delete User (DELETE):

API Call:

DELETE /users/{userId} for example u1

Response:

```
{  
  "message": "User Deleted"  
}
```
